**SPA
FORMULA**

ALKALINITY UP

**Raises
Total Alkalinity**

ACTIVE INGREDIENT:

Sodium Bicarbonate.....100%

**KEEP OUT OF REACH OF CHILDREN
CAUTION**

See first aid statement and other
precautions on back panel.

Critical to alkalinity control, this granular formula effectively raises alkalinity levels which might otherwise cause equipment corrosion. This product is a special compound used to increase the total alkalinity in spa water.

DIRECTIONS FOR USE

Test for total alkalinity with a reliable test kit. The desired range for total alkalinity is 80-140 ppm.

This product increases the effectiveness of the disinfectant, and helps prevent scale formation. It also prevents corrosion of metals, etching of spa surfaces, eliminates "bounce", and maintains pH at the proper level. Easy to use; dissolves quickly.

1. Add 1 oz. (2 tbsp.) to spa water.
2. Allow water to circulate for 30 minutes.
3. Retest water and repeat Steps 1 and 2 until the desired level is reached.

For best results, dissolve granular products first by adding to a small plastic pail filled with water.

CAUTION. Contains sodium bicarbonate.

FIRST AID

IF IN EYES: Flush eyes with water for 15 minutes, while lifting eyelids. Call a physician if irritation persists.

IF ON SKIN OR CLOTHING: Brush off excess and rinse skin with water.

IF INHALED: Remove to fresh air.

IF SWALLOWED: If large amounts are swallowed, drink a large quantity of water. Do not induce vomiting. Call a physician.

STORAGE AND DISPOSAL

Store closed container in a cool, dry and well-ventilated space. When container is empty, rinse thoroughly with water, wrap securely in newspaper and place in trash collection.

KEEP OUT OF REACH OF CHILDREN
